

September 2019

I'm from Brazil and I'm in the 8th period of Biomedical Engineering at INATEL (National Institute of Telecommunications).

I'm very grateful for the opportunity to have taken the course at Jade Hochschule and for all the support that has been offered to us. I enrolled in the course of Biomedical Signal and Image Acquisition, Processing and Analysis, where we learned a little more about Biosensors, Instrumentation, Acquisition and Signal Processing, in addition to Medical Image Processing using Matlab.

Our accommodation was at the Arcona houseboat, where there was a beautiful view, the rooms were comfortable, and breakfast was offered throughout the course.

On the first day of school, activities were performed so that we could have the first contacts with other students of different nationalities.

During the course, the activities were very dynamic, with theoretical and practical part, and the teachers divided us into groups, so we could work as a team and meet better classmates. At the end of each week, we performed presentations and tests. The teachers were attentive and offered us all the necessary support.

In the evenings we were offered leisure options in the city, where we could get to know Wilhelmshaven better and enjoy its wonders.

On weekends the organization of the Summer Course took us to some neighboring cities to visit some companies and places, such as Meyer Werft Papenburg and visiting Lowenstein Medical Systems and Airbus. It was a wonderful experience to know the whole company, and how is the fabrication of these structures. Guides were present with us to explain all the processes.

I never had the opportunity to leave the country, and with this partnership of Jade Hochschule with Inatel I had this great dream come true, I am very grateful for all that was offered.

The result of all this was a great professional and personal growth, I studied subjects related to my field of study, I met people and made friends from other countries, I was able to practice and improve my English, and also, to know wonderful places in Germany. I lived different experiences, learned new things, knew new cultures and customs. Jade Hochschule is a great University reference, congratulations for Summer Course initiative. Thank you for everything. I hope to see you one day again.
